

The Wallingford Lab in the Mother Infant Research Institute at Tufts Medical Center in Boston is seeking a Postdoctoral Research Fellow to pursue mechanisms of placental vascular development and pathophysiology as a member of NIH and AHA funded studies.

Prior research experience in the areas of vascular development, vascular disease, placenta biology, and/or mammalian development is preferred. Extensive experience with molecular biology, histology, literature review, scientific writing, experimental design, independent and team research, and thorough laboratory record keeping is required.

The applicant will have access to resources within the Mother Infant Research Institute, the Molecular Cardiology Research Institute, and the Department of Cell, Molecular, and Developmental Biology on the Tufts Health Sciences campus in Boston. We also provide extensive support with respect to professional development, advancing grant writing skills, and opportunities to present research findings at scientific conferences.

Please submit a cover letter, CV or resume, and contact information for three references to mwallingford@tuftsmedicalcenter.org. Available immediately. Application review will occur on a rolling basis.
